Open Source Center
an expertise center dedicated
to free and open source software

Our expertise at your service to assist you from end to end

Present in every single layer of the information system, open source software is the next cost reduction leverage and is boosting performance when properly handled. Being one of the main open source software service provider, Atos' Open Source Center brings long-lasting solutions and proven expertise since 2003.

Atos

Open Source software without hassle

Consulting

The **Open Source Center's** experts help you to make the right decision. Thanks to **strategic watch**, technical watch and **opportunities analysis**, they identify, measure, assess and recommend the **Open Source components that suits your needs**, from both technical and financial point of view. With more than **300 software components in our scope**, we provide a real open source governance.

Implementation assistance

Our experts support you from the early stage of the implementation and assist you in detailed **design**, detailed **application architectural** and technical study, definition of **migration plan**, development, integration and tests, performance tuning and deployment.

Evolutive maintenance

Our teams are able to deliver evolutive maintenance that allows **mutualized** development. Our 100% upstream policy and our close relationship with Open Source communities insure that your evolutions are pushed upstream.

Training

We can provide continuous training, giving you access to **knowledge**, **methods** and **best practices** built on open source software by our teams for almost **10 years**.
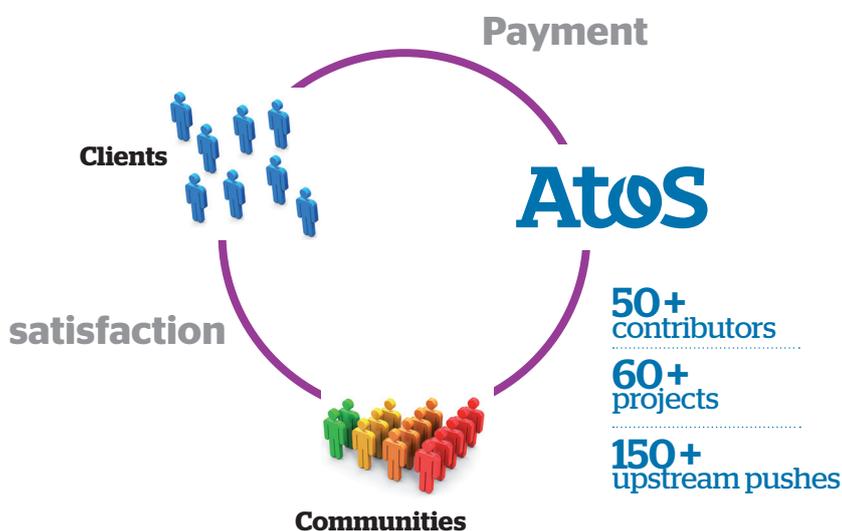

Support

Our experts also offer technical support through a **single point of contact available 24x7** for any problem or information request with **SLAs** on acknowledgment, workaround and solving, with either **unlimited plan** or **pay-per-ticket billing**.

Sharing our methodologies

The Open Source ecosystem being very rich, it is mandatory to have a method to evaluate and assess open source software, based on requirements, on risks, and from a technical and a functional point of view. Based on its activities of support and technological watch, Atos has developed a methodology named **QSOS** (Qualification and Selection of Open Source software) distributed under free license. Since the success of this method, Atos now provides a complete framework for organizing and equipment of an open source governance. Please visit **drakk.github.com**
